

## Implementation of an EMS ISO14001 and EMAS

### Introduction

This course is designed for anyone wishing to understand how an organisation can implement an environmental management system (EMS) to achieve ISO14001 or the Eco Management & Audit Scheme (EMAS).

It provides a practical insight into the implementation of an EMS to provide benefits to an organisation including; waste reduction, energy consumption optimisation, carbon footprinting and cost reduction.

It is particularly useful for Directors, Managers and Supervisors but it is equally beneficial to team leaders, technicians or any other employees.

### Course Location

On site at your premises or at our dedicated training facility.

### Course Duration

One day.

### Key Topics

- General introduction.
- Pressures to have a formal EMS.
- Commitment.
- A quality and systems thinking approach to environmental management.
- Different approaches to environmental management and systems from “real life” examples.
- What the Standards require.
- Environmental law and practical ways to prevent enforcement.
- Interactive workshops designed to reinforce understanding.

### Qualification

On attending the course the delegate will be awarded a certificate of course completion.

**All courses are delivered by qualified trainers with practical experience**
